

Implementing Primary Care Networks in West Essex

Peter Wightman

May 2019

CCG Board

Why Primary Care Networks?

Things are changing...

The changing health needs of the population are putting pressure on the health and social care system in England.

Ageing population

Between 2017 and 2027, there will be 2 million more people aged over 75.

Long term conditions

The main task has changed from treating individual episodes of illness, to helping people manage long-term conditions.

New Treatments

The steady expansion of new treatments gives rise to demand for an increasing range of services.

NHS Long term plan...

- ***We will boost 'out-of-hospital' care, and finally dissolve the historic divide between primary and community health services.***
- Primary Care Networks are an essential building block to achieve this pledge.
- 5 year GP contract reform to secure investment, offer practical solutions to workforce and deliver objectives in Long Term Plan

What are Primary Care Networks?

- Primary care networks are small enough to give a sense of **local ownership**, but big enough to have **impact** across a 30-50K population.
- They will comprise groupings of clinicians and wider staff **sharing a vision** for how to improve the care of their population and will serve as **service delivery units** and a **unifying platform** across the country.

How will that look within a local system?

Individual

- Each person can access **joined up, proactive and personalised care**, based on 'what matters' to them and their individual strengths, needs and preferences

Network 30-50k

Practices continue to provide core services
Network Contract DES provides practices opportunity to work collaboratively with other practices health, social care and voluntary partners to deliver services
Practices and other health, social care and voluntary partners collaborate as **primary care networks**, providing additional services that can't be delivered on a smaller scale

Place 250-500k

- Primary care **interacts with hospitals, mental health trusts, local authorities and community providers** to plan and deliver integrated care
- In some systems, **federations** support efficiencies of scale and provide a voice for primary care

System 1m+

- Primary care participates as an **equal partner in decision making** on strategy and resource allocation
- Action is taken to ensure **collaboration** across hospitals, community services, social care and other partners, helping to join up and improve care
- **Data is used to deploy resources** where they can have the maximum impact

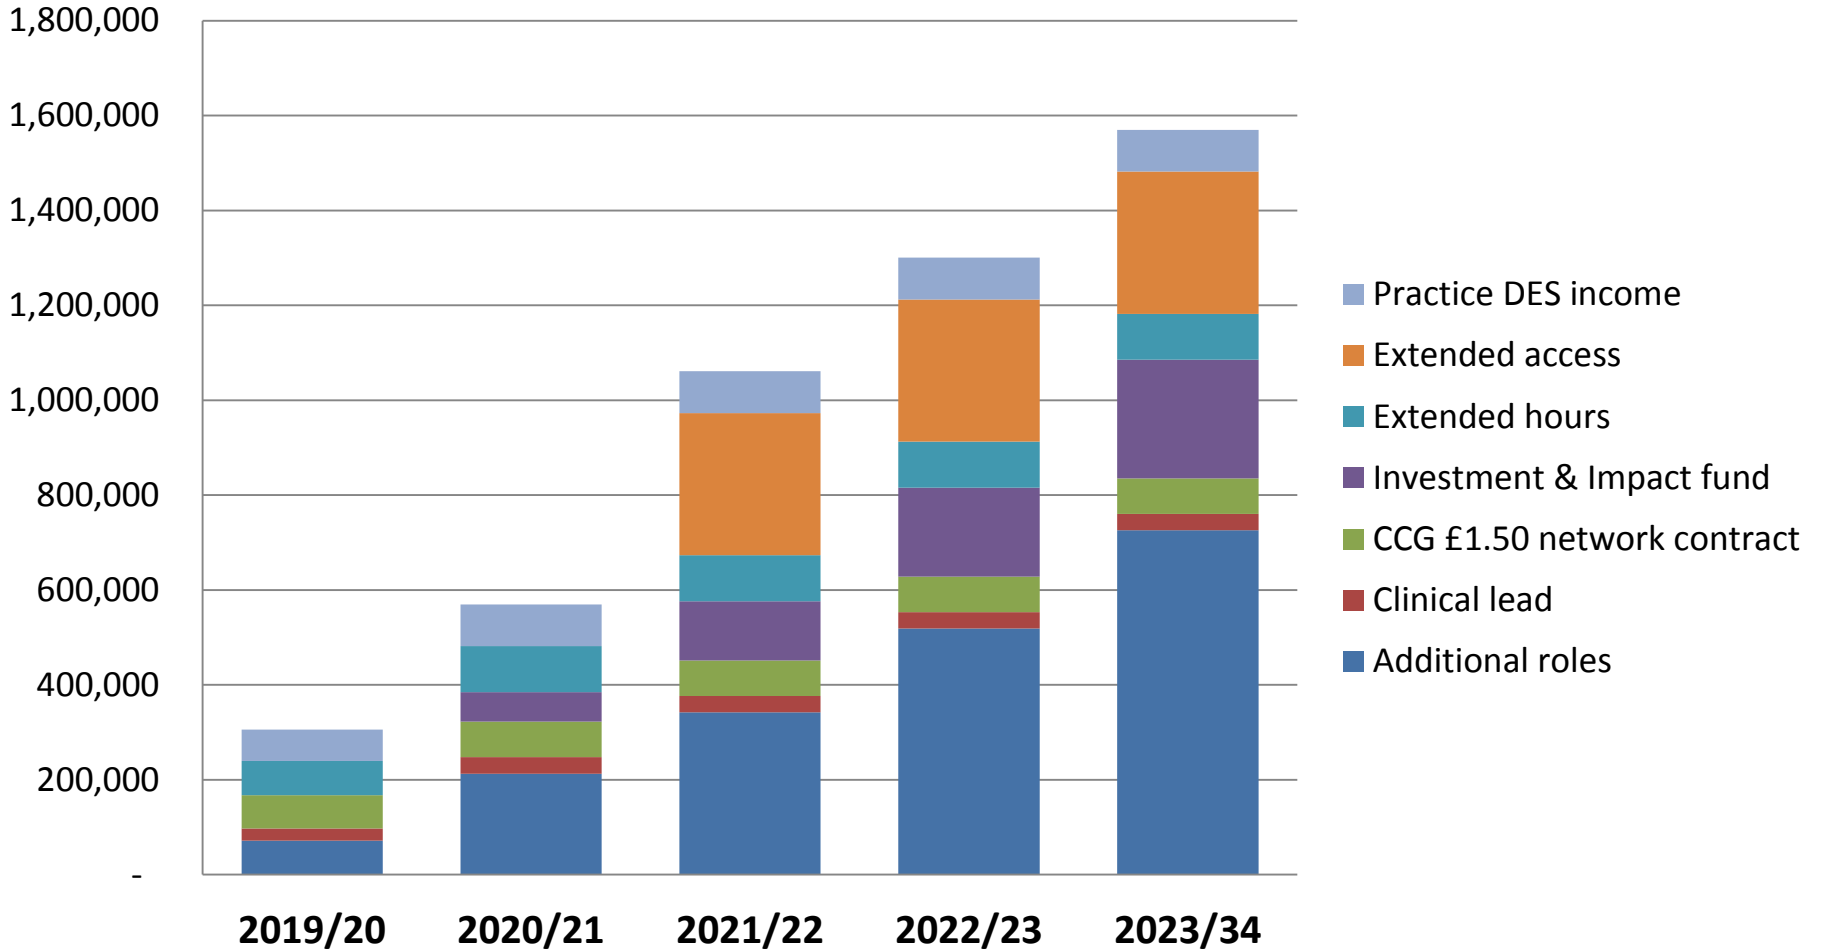

What will PCNs do?

PCNs will play a strong role in:

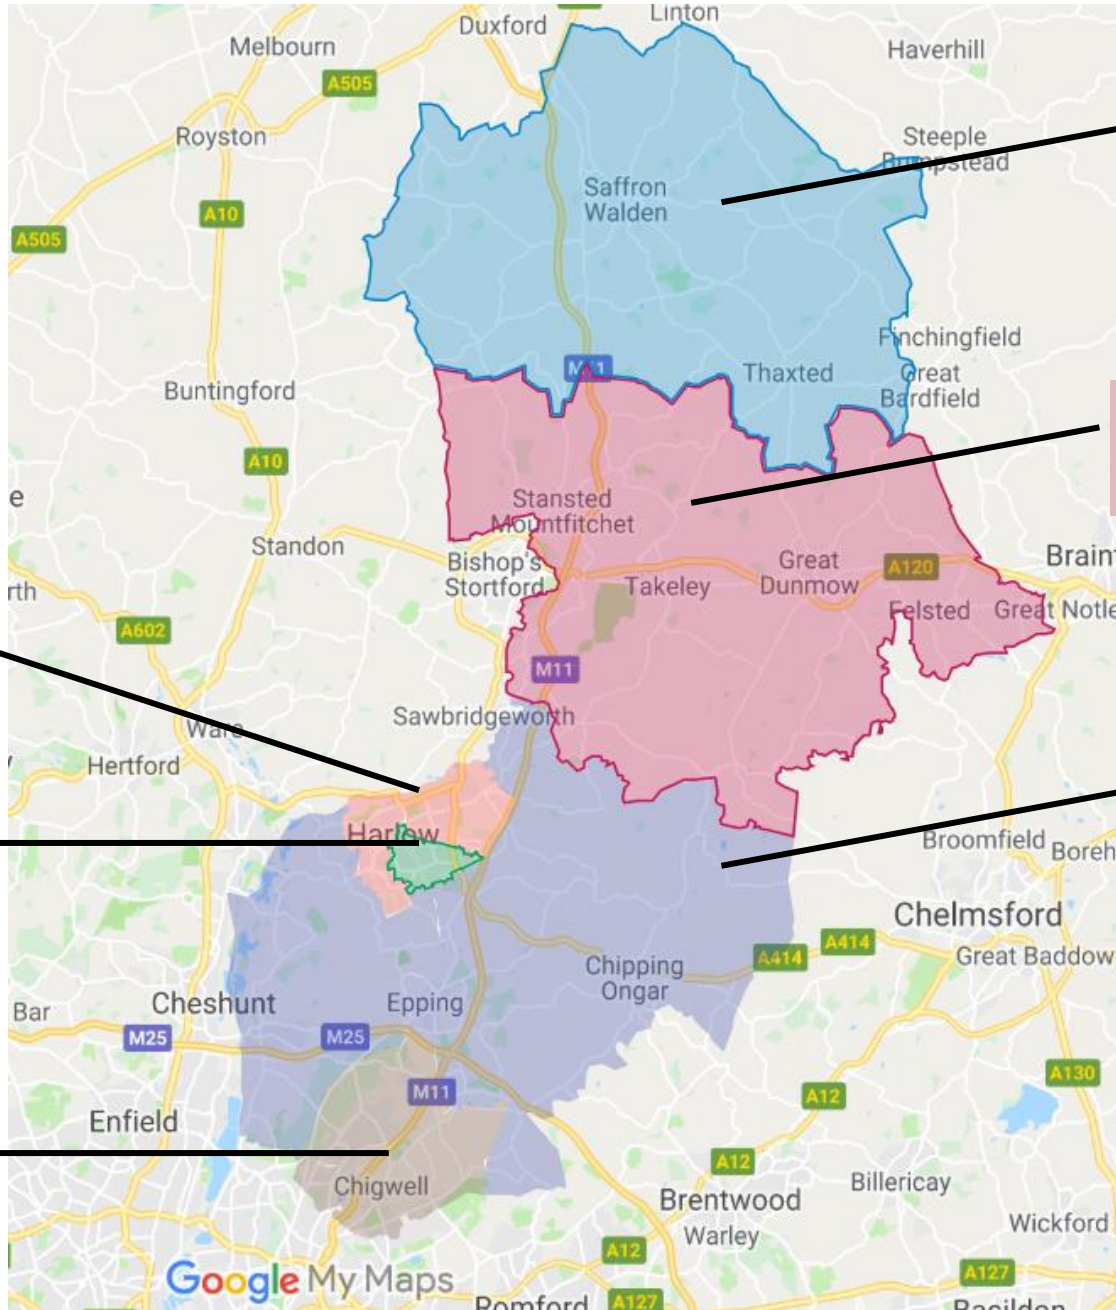

- improving **access** to general practice
- develop the **workforce** to ensure sustainable primary care into the future
- deliver **standardised care** across a number of national service specifications from 2020
- oversee and influence the use of **resources** within their population - investment and impact fund from 2020.
- **Representing primary care** within the Integrated Care System and local Integrated Care Partnership
- Remit grows year on year

Increasing national funding

Funds via DES per 50,000 PCN
